Chemical industry is a basic industry supplying and supporting a great number of raw materials and various basic products for frontier industries.

Continuous growth of chemical industry producing high quality of products is required to support various industries under closed and substantial educational-industrial complex. As almost concerned people in the educational-industrial fields know and recognize well, at present educational-industrial complex seem to oil and water between educational field and industrial field in exchange of industrial technical matters. Under the running of existing education system, so many time is essential to university graduate to get much more knowledge necessary to make the work satisfactory after they join a company. If the educational-industrial complex goes efficiently well in harmony, they can easily get necessary knowledge possible application for fast-developing industrial field. In addition, concerned scholars in educational field have a good chance to find many kinds of problems to solve in industrial field. In this paper author shows major engineering activities in the industrial field and renovated proposal on the subjected matter.
