(imlee@inha.ac.kr<sup>†</sup>)

Recently the importance of safety education has attracted much attention with the increase of laboratory accidents. Since the introduction of laboratory safety law in 2006, various kinds of safety education have been carried out in Korea but the demand of more efficient and higher level safety education still exists.

In order to establish a more efficient safety education program, the present status of safety education in foreign countries including USA and Japan has been summarized. Desired laboratory safety education system will be discussed by comparing the foreign systems with internal ones.
