

• Ultimate sinusoidal response 
$$(t \to \infty)$$
  
 $y_{c}(t) = \lim_{w \to t^{-1} \to 1} \frac{K_{1}}{w^{t^{-1}} + 1} (w^{t^{-1}} - w^{t} \cos w + \sin w)}$   
 $= \frac{K_{1}}{w^{t^{-1}} + 1} (w^{t^{-1}} - w^{t} \cos w + \sin w)}$   
 $= \frac{K_{1}}{w^{t^{-1}} + 1} (w^{t^{-1}} - w^{t} \cos w + \sin w)}$   
 $= \frac{K_{1}}{\sqrt{w^{t^{-1}} + 1}} (w^{t^{-1}} - w^{t} \cos w + \sin w)}$   
 $= \frac{K_{1}}{\sqrt{w^{t^{-1}} + 1}} (w^{t^{-1}} - w^{t^{-1}} - w^{t^{-1}} + w^{t^{-1}})}$   
 $= \frac{1}{\sqrt{w^{t^{-1}} + 1}} (t^{-1} - w^{t^{-1}} - w^{t^{-1}} + w^{t^{-1}})} (t^{-1} - w^{t^{-1}} - w^{t^{-1}} + w^{t^{-1}})} (t^{-1} - w^{t^{-1}} - w^{t^{-1}} + w^{t^{-1}})} (t^{-1} - w^{t^{-1}} - w^{t^{-1}} + w^{t^{-1}}$ 

## **1ST ORDER VS. 2ND ORDER (OVERDAMPED)**

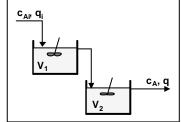

Initial slope of step response

1st order: 
$$y'(0) = \lim_{s \to \infty} \left\{ s^2 Y(s) \right\} = \lim_{s \to \infty} \frac{KAs}{ts+1} = \frac{KA}{t} \neq 0$$
  
2nd order:  $y'(0) = \lim_{s \to \infty} \left\{ s^2 Y(s) \right\} = \lim_{s \to \infty} \frac{KAs}{t^2 s + 2zts + 1} = 0$ 

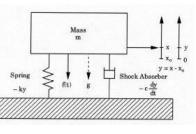

Shape of the curve (Convexity)

1st order:  $y''(t) = -Ke^{-t/t} < 0$  (For K > 0)  $\Rightarrow$  No inflection 2nd order:  $y''(t) = -\frac{KA}{t_1 - t_2} \left(\frac{e^{-t/t_1}}{t_1} - \frac{e^{-t/t_2}}{t_2}\right)$  $(+ \rightarrow - \text{ as } t \uparrow) \Rightarrow \text{ Inflection}$ 

• Two tanks in series - If  $\mathbf{v}_1 = \mathbf{v}_2$ , critically damped. - Or, overdamped (no oscillation)  $\frac{C_A(s)}{C_{Ai}(s)} = \frac{1}{((V_1/q)s+1)((V_2/q)s+1)}$ 

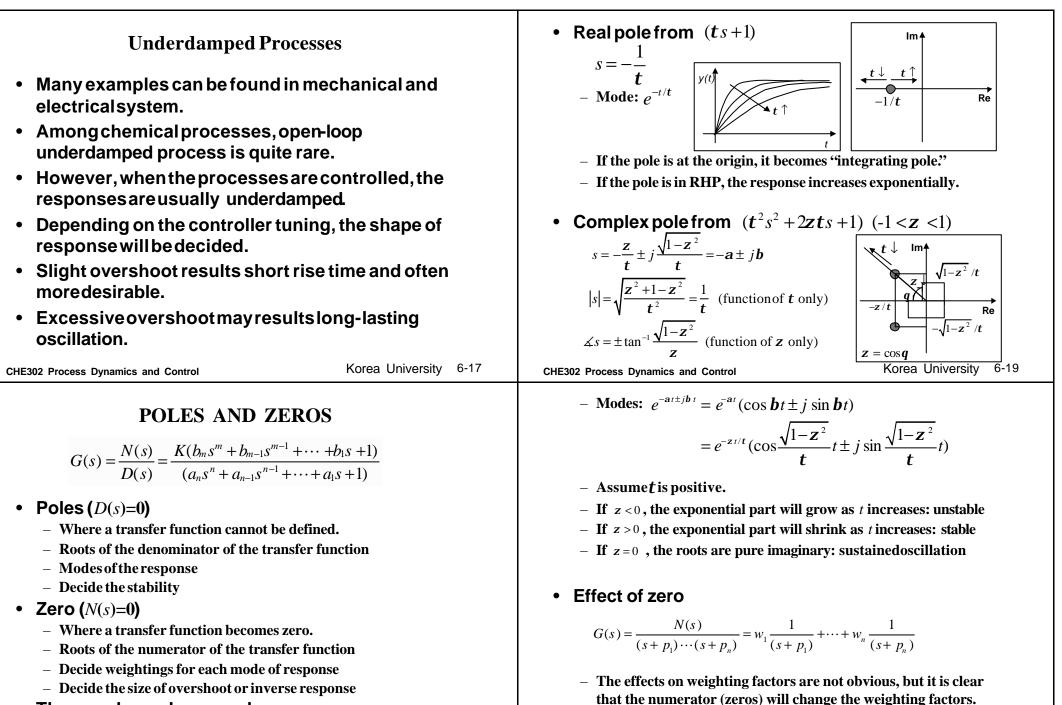

- Spring-dashpot(shockabsorber)
  - By force balance (mg + f(t)) - ky - cv = ma my'' = -ky - cy' + (mg + f(t))  $\left(\sqrt{\frac{m}{k}}\right)^2 y'' + 2\sqrt{\frac{c^2}{4mk}}\sqrt{\frac{m}{k}}y' + y = \tilde{f}(t)$ Z (can be <1: underdamped)

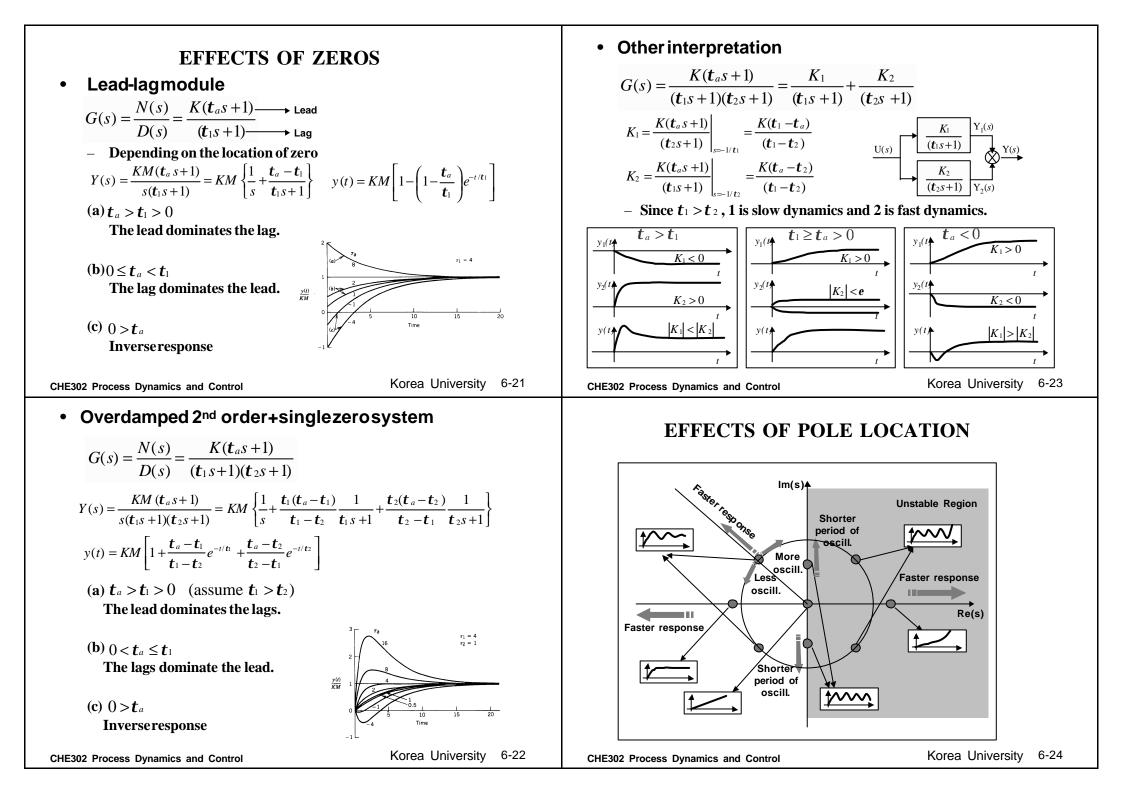

Korea University 6-14

CHE302 Process Dynamics and Control

• They can be real or complex
